Education

AkiraChix, codeHive -Diploma
Information Technology
February 2022 - November 2022

Relevant Courses

Front-End Development

- Implementing DOM manipulation in Javascript.
- Using Reactjs as a framework.

Back-End Development

- Development of server side applications using Django.
- Building RESTful APIs using the Django framework.

Mobile Development

- Kotlin language to create Android applications, and version control with git and USB debugging.

UI/UX Design

- In Depth study of color psychology, design software, and the use of design components and concepts in visual communication.

Internet Of Things

- Employing embedded systems and connecting communication hardware to create web-based smart gadgets.

Industrial Design

- Fusion360 design modeling to create three-dimensional designs and models for assembly and manufacturing.

Kengaaju Laura Alinda

Software Developer | UI/UX designer

Alinda first became aware of her artistic and design talent in preschool, where she felt more alive by exploring her creative ideas through sketching and experimenting with colors. After being exposed to the technology space, she discovered the intersection between art and technology. As a creative Software Developer, Alinda believes in blurring the line between human nature and machine efficiency, AI-generated art can bring a new perspective and unorthodox creativity to the industry. Over time she has learned that while good designs can be inventive, great designs demand transparency.

Skills

- Basic understanding of Python lists ,arithmetic operations , integration of APIs and server side components.
- Proficient in creating responsive web applications using bootstrap.
- Intermediate understanding of DOM manipulation using Javascript.
- Competency in using tools on illustrator to create illustrations to convey key information for designing user interfaces.
- Knowledge on recycler views, USB debugging and app indexing using firebase.
- Understanding of how to use tools and features on Figma to create wireframes, mockups and prototypes.
- Solid understanding of the design thinking process and ability to research and design to come up with reliable solutions.

Achievements

Coding Black Females

I was featured in the '[#VisibleInTechCampaign](#)' by Coding Black Females community that aimed at creating visibility and recognition for women in the tech space.

Projects

UI / UX design projects

Various design projects created using adobe Illustrator, Photoshop and Figma. ([My Portfolio](#)).

Apparel Place

[An e-commerce website](#) designed on Figma and built using Python Django that deals in selling women's clothing.

Work-out fitness App

[An app built](#) on Android using Kotlin that aims at enabling its user to track and plan their daily workouts.

Entare Pride (07/22- Present)

[Research Document](#) on Lion conservation and Identification in Masai Mara Game Reserve
